

Instant E-mail Alerts for user caused miscounts and failed Rx Verifications

Tuesday, 19 August 2008 16:56 - Last Updated Wednesday, 27 April 2011 18:34

When using features such as prescription size or Rx verification, the TORBAL server monitors and records pill counting transactions to make sure that verification was performed successfully and that the count was filled accurately. If a user causes a miscount, by filling too many or not enough pills as required, or if a user fails Rx verification, the server instantly sends out an email alert to all administrators with a notification. This becomes especially useful when dispensing C2 narcotics or expensive drugs.
