

Experience perfect harmony of performance, versatility, and affordability. The DRX-500SX is TORBAL's newest tablet counter designed to make prescription counting even faster, simpler and more accurate. From the corner pharmacy, to the largest clinic, or hospital, the DRX-5SX pill counting system tackles pill counting with power and speed. All at a price that fits your budget! [See the DRX-500SX now...](#)

Fast, Safe, Intuitive, and very Accurate.

[Pill counting](#) is usually a quick three-step process that takes only seconds as pills are virtually

counted as fast as you can pour them. Unlike what is true about many mechanical pour-through pill counters, when counting with a TORBAL, the pills never come in contact with any mechanical parts of the unit. This eliminates both cross-contamination and the need to clean between counts.

[No cross-contamination](#) , no frequent cleaning, and no parts to disassemble – that is the new PCS-1 TORBAL tablet and capsule counter. The PCS-1 is equipped with an Rx Verification barcode scanner, a biometric reader, two LCD displays and an automatic vial tray. Check out the PCS-1 BETA in action by watching our video.

TORBAL Pill Counting scales are NTEP Certified

Advantages of automatic pill counters include the ability to dispense pills in a controlled manner, reducing the risk of medication errors. The NTEP (National Conference on Weights and Measures) has established standards for automatic pill counting devices to ensure accuracy and reliability.

Functions such as [NDC and RX verification](#) eliminate potential errors in prescription filling and ensure the correct prescription is counted and filled.

The Rx label NDC barcode is compared to the NDC barcode on the drug's supply bottle. If no discrepancy is found, you are allowed to continue with [pill counting](#) .
